

EXCESS FLOW VALVE (EFV) CUSTOMER NOTIFICATION

EFVs are designed to shut off the gas flow automatically when the flow exceeds its design limits. A new regulation (49 CFR §192.383) allows customers who meet certain requirements to request an EFV installation. An EFV is installed on the gas service line on your property.

EFVs reduce the risk of fire, explosion, personal injury, and property damage by shutting off the flow of gas automatically if the service line breaks.

If a customer requests installation of an EFV and the load does not exceed 1,000 SCFH and the service line operates at a pressure greater than 10 psig, **CITY OF MOULTON** must install an EFV at a mutually agreeable date.

Typical cost of EFV installation is between \$ 450⁰⁰ and \$ 1000⁰⁰. Please contact **CITY OF MOULTON** for an estimate.

After installation of an EFV, maintenance and replacement fees may apply.

If you would like to know more about EFV installation, please contact **CITY OF MOULTON** for more information.
